

List of TCP and UDP port numbers

From Wikipedia, the free encyclopedia

Jump to: [navigation](#), [search](#)

This is a list of [Internet socket port numbers](#) used by protocols of the [Transport Layer](#) of the [Internet Protocol Suite](#) for the establishment of host-to-host communications.

Originally, these ports number were used by the [Transmission Control Protocol](#) (TCP) and the [User Datagram Protocol](#) (UDP), but are also used for the [Stream Control Transmission Protocol](#) (SCTP), and the [Datagram Congestion Control Protocol](#) (DCCP). SCTP and DCCP services usually use a port number that matches the service of the corresponding TCP or UDP implementation if they exist. The [Internet Assigned Numbers Authority](#) (IANA) is responsible for maintaining the official assignments of port numbers for specific uses.^[1] However, many unofficial uses of both well-known and registered port numbers occur in practice.

Use	Description	Color
Official	Port is registered with IANA for the application	white
Unofficial	Port is not registered with IANA for the application	blue
Multiple use	Multiple applications are known to use this port.	yellow

Well-known ports

The port numbers in the range from 0 to 1023 are the *well-known ports*. They are used by system processes that provide widely used types of network services. On [Unix-like](#) operating systems, a process must execute with [superuser](#) privileges to be able to bind a network [socket](#) to an [IP address](#) using one of the well-known ports.

The range of port numbers from 1024 to 49151 are the registered ports. They are assigned by [IANA](#) for specific service upon application by a requesting entity.^[1] On most systems, registered ports can be used by ordinary users.

This is an **incomplete list** of notable ports. See the [Service Name and Transport Protocol Port Number Registry](#) of IANA for the complete list of assigned ports.
